Video Streaming Test

2025-10-28-17:40:56

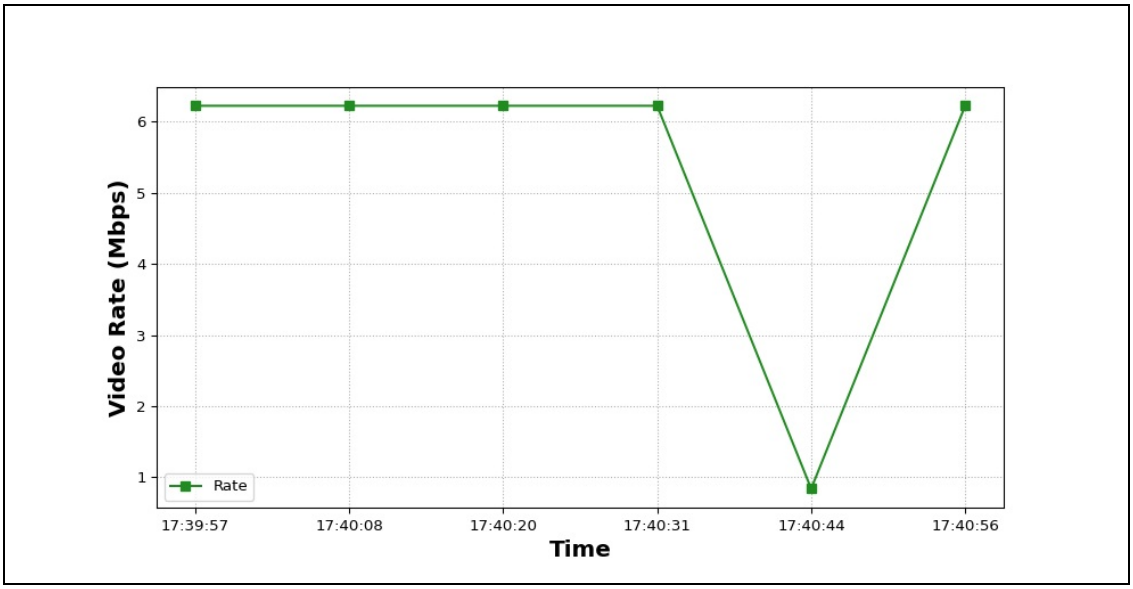
Objective

The Candela Video streaming test is designed to measure the access point performance and stability by streaming the videos from the local browseror from over the Internet in real clients like android which are connected to the access point,this test allows the user to choose the options like video link, type of media source, media quality, number of playbacks.Along with the performance other measurements like No of Buffers, Wait-Time, per client Video Bitrate, Video Quality, and more. The expected behavior is for the DUT to be able to handle several stations (within the limitations of the AP specs)and make sure all capable clients can browse the video.

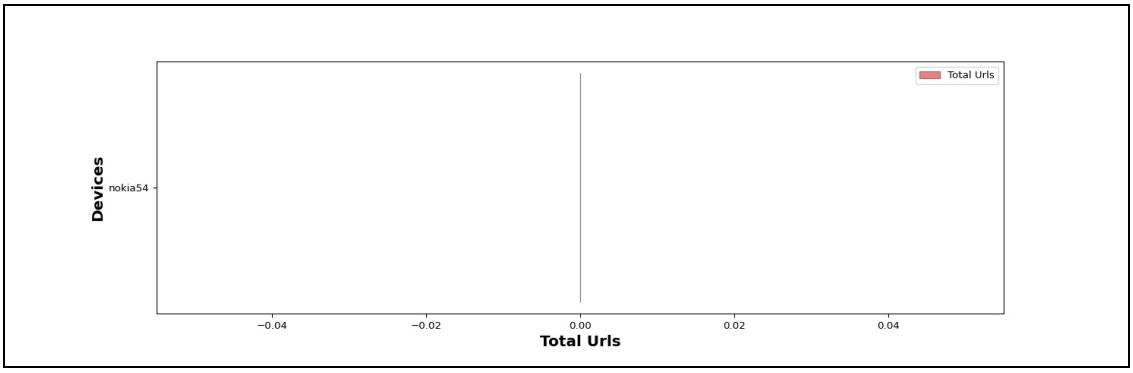
Input Parameters

Test Setup Information	Testname	video_streaming_test
	Device List	nokia54 (Android)
	No of Devices	Total(1): Android(1)
	Incremental Values	No Incremental Value provided
	URL	test-streams.mux.dev/x36xhzz/x36xhzz.m3u8
	Media Source	Hls
	Media Quality	1080P

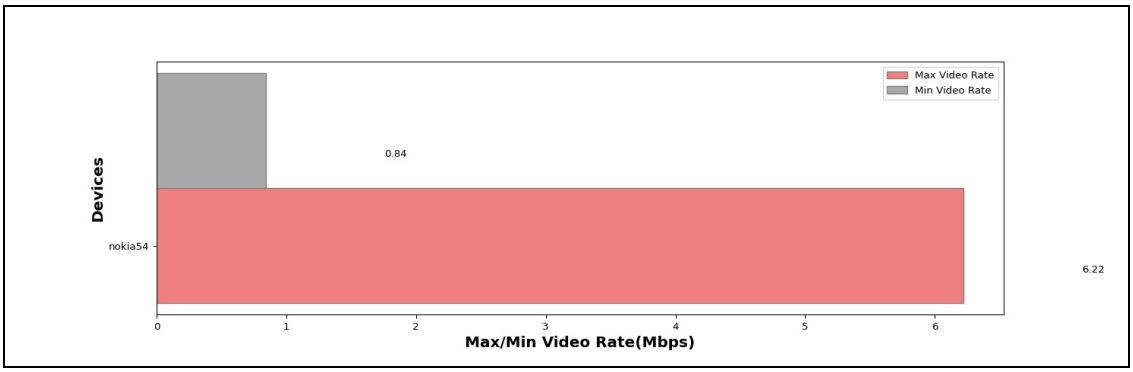
Realtime Video Rate: Number of devices running: 1



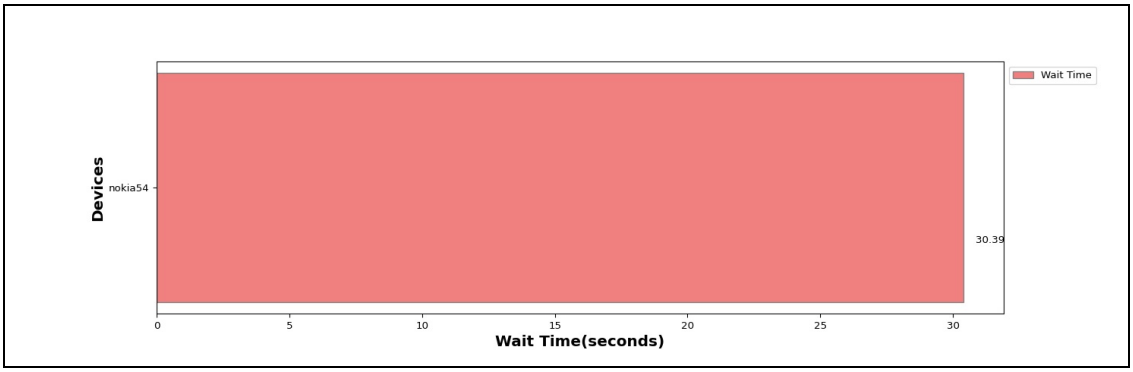
Total Urls Per Device



Max/Min Video Rate Per Device



Wait Time Per Device



Overall - Detailed Result Table

The below tables provides detailed information for the Video Streaming test.

DEVICE TYPE	Username	SSID	MAC	Channel	Mode	Buffers	Wait-Time(Sec)	Min Video Rate(Mbps)	Avg Video Rate(Mbps)	Max Video Rate(Mbps)	Total URLs	Total Errors	RSSI (dbm)	Link Speed	Bytes Read (bytes)	Average Rx Rate (Mbps)
Android	nokia54	NETGEAR_2G_Open	1a:b8:20:4a:6e:05	149	802.11abgn-AC 80	2	30.39	0.84	5.36	6.22	0	0	-43 dbm	433 Mbps	53890952	2.3

Detailed Total Errors Table

The below tables provides detailed information of total errors for the web browsing test.

DEVICE	TOTAL ERRORS
nokia54	0
